

## i>Clicker instructions

Here is the link to the i>clicker web site <http://www1.iclicker.com/>

It is best to set up your class in i>clicker before your first i>clicker class. When setting up your class enter the serial number of the blue i>clicker so your i>clicker will act as the instructor and not as a student. Also enter the channel from the list of channels in the **Channels** file. Then wait until after drop/add and after you have used i>clicker in a few classes to import your class into i>grader. Your student's responses data will be saved and can be easily be merged with your class list after you have used them for a few weeks. I suggest using the student name and ID number as keys to merge your class list with the student records in i>grader. Please also check out the **Registration Instructions** for students to register their i>clicker. Let the Help Center know if you are teaching in a classroom that is not listed so an i>clicker receiver can be installed.

This is a reminder that you also need to notify the bookstore so that they can have an appropriate supply of i>clickers in stock for your students.
