

218 Power Guidelines

The Multi Purpose Room has 9 separate electrical circuits in the room. These circuits are labeled on the outlets (e.g. 19, 21, etc). Each outlet has 20 Amps and 120 Volts (2400 Watts total). The location of the outlets may cause overloads if improperly used. Please direct customers to spread their power needs to different circuits (outlets). Use extension cords and power strips when needed. Lighting equipment tends to require a lot of power – please be aware.
