

Flipping Book Component

The flipping book component allows a PDF document to be converted in a digital flipbook. The flipbooks themselves must be created by the Office of Web and Digital Media. Email us (Josh Leiboff leiboff@kutztown.edu or Kelly Smith ksmith@kutztown.edu) to create the flipbook. The WDM office will create the flip book and the component that is needed to add to your page. They will send you the name and xID of the appropriate FflippingBook component for you to add to the page(s) that you want to display it.

Adding a Flipping Book Component to a Page

From a blank component field in the Content Box

1. click SELECT
2. In the select a component window, you can filter by component type field (KU Flipping Book Component) or type the name provided to you in the name field. Choose the appropriate component and click OK.

Adding a Flipping Book Component to a Two-Column Container

If you wish to have text alongside your flipping book, you will need to create a two-column container with the flipping book on one side, and a text area on the other.

From a blank component field in the Content Box

1. Click CREATE
2. In Create new component window, choose KU Two Column Container
3. On the side you want the Flip book, expand the Column Content field, click SELECT
4. In the select a component window, you can filter by component type field (KU Flipping Book Component) or type the name provided to you in the name field. Choose the appropriate component and click OK.
5. On the side you want the text field, expand the Column Content field, click CREATE.
6. In Create New Component window, choose KU Text Area. Add the desired text in the area.
